

RABEEHA KAMRAN

AI Automation Intern • Software Engineering Student, FAST-NUCES
rabeehakamran801@gmail.com • 0333-5711384 • Islamabad • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Software Engineering student (7th semester, CGPA 3.26) with about a year of hands-on internship experience building Python and LLM-powered automation: n8n workflows, FastAPI services, multi-agent LangGraph pipelines, and third-party API integrations (Groq, Gemini, Supabase, Twilio, Gmail). Experienced in data processing with Pandas and in testing and validating AI outputs for reliability. Looking to apply this in a team that ships real automation workflows.

EXPERIENCE

AI Intern | Sigma Evolution

Jul 2026 – Aug 2026 • Islamabad

- Built a resume-analyzer FastAPI microservice with hybrid ATS scoring: deterministic structural parsing (PyMuPDF, python-docx) combined with Groq LLM semantic evaluation, exposed through REST endpoints.
- Designed the pipeline to balance consistency and nuance by pairing rule-based checks with LLM judgment, so scores stay reproducible and easier to debug.

Intern | SEAL Lab

Jun 2026 – Jul 2026 • Islamabad

- Built a full-stack cloudburst-risk dashboard (React/Vite, Express, Supabase) that ingests and processes three climate datasets (ERA5, CHIRPS, NASA POWER), with Leaflet maps and an event validation view.
- Found that the standard 100mm/hr threshold never triggers in ERA5 data because of grid averaging; validated the issue and redesigned the method around per-location 99.5th-percentile thresholds.

Volunteer | Taleemabad

Mar 2026 – Apr 2026 • Islamabad

- Built an automated pipeline connecting Supabase to the Taleemabad AI Assistant API: pulls textbook content by lesson-plan tags and generates AI lesson-plan reviews at scale.
- Tested AI-driven educational apps for primary school users and documented feedback and bug reports; researched speech diarization (audio segmentation, speaker separation).

AI Intern | AI GenMat

Jun 2025 – Aug 2025

- Completed an 8-week AI internship covering Python, NumPy/Pandas data manipulation, web scraping, and regex-based data extraction and cleaning; applied classical ML (Linear Regression, Naive Bayes) and NLP with NLTK.

PROJECTS

CV Screener (n8n Workflow) — n8n, Groq (LLaMA 3.1), Notion, Google Workspace, Gmail

- Built an end-to-end n8n pipeline: a Google Form submission triggers CV retrieval from Google Drive, structured LLM screening via Groq, and logging to a Notion database with score, strengths, gaps, and a Strong Yes / Yes / No recommendation.
- Connected Google Sheets, Drive, Notion, and Groq via REST calls (HTTP Request nodes, OAuth2 and API keys), wrote JavaScript Code nodes to parse CV data and LLM JSON output, and added conditional Gmail alerts for candidates scoring 7/10 or higher. Documented setup in a README.

Job-Alert Filtering Agent Pipeline — Python, LLM APIs, Supabase/pgvector, Twilio, Gmail

- Built an end-to-end automation that reads job-alert emails from Gmail, extracts listings with an LLM agent, filters them with embeddings, ranks them with an LLM judge, stores results in Supabase/pgvector, and sends a WhatsApp digest via Twilio.

Agentic Data Analysis Copilot — LangGraph, FastAPI, Groq (LLaMA 3.1), Plotly, SQLAlchemy

- Built a multi-agent system that routes queries via an LLM to specialised Stats, Code, and Viz agents for analysis, anomaly detection, and Plotly charts; added sandboxed code execution, conversation memory, and PDF report generation.

Adaptive Exam Prep Coach — LangChain, RAG, Chroma, Groq (LLaMA 3.3), Pydantic, SQLite

- Built a RAG study assistant that turns course PDFs into grounded quizzes, with an LLM-as-judge grader that returns Pydantic-validated structured output and flags specific misconceptions in student reasoning.
- Added adaptive difficulty routing driven by a persistent weakness profile, with spaced-repetition scheduling in SQLite.

SKILLS

AI & LLM Integration: LLM APIs (Groq, Gemini), Prompt Engineering, LLM Evaluation, RAG, Embeddings & Vector Databases (FAISS, Chroma, pgvector), Multi-Agent Systems, NLP

Automation & APIs: n8n (HTTP Request and Code nodes, OAuth2), REST APIs, JSON, API Integration, FastAPI, Supabase, Twilio, Gmail integration, LangChain, LangGraph

Languages & Data: Python, SQL, C++, HTML/CSS, Pandas, NumPy, Scikit-learn, SQLAlchemy

Tools & Practices: Git, GitHub, Docker, GCP, Software Testing & Debugging, Technical Documentation

EDUCATION

BS Software Engineering | FAST-NUCES Aug 2023 – 2027 • Islamabad

CGPA: 3.26 • Bronze Medal (Fall '25) • Dean's List (Fall '25)
